Perennials and Biennials 1932

You'll Enjoy Having
Perennials
In Your Garden

EVERY BOY AND GIRL SHOULD PLAN
A FLOWER GARDEN OF HIS OWN.

Dear Friend:

HIS LITTLE FOLDER is sent to tell you about our Perennials. Nine years ago we started to grow Perennials for our customers, and have each year increased the number of varieties until now we have approximately two hundred varieties.

When you plant Perennials in your garden you are adding to it a feeling of permanence, character and prestige. With Perennials you also get a sense of friendship, for you learn to know each plant individually, just how it is going to act, and you will find that each year you look for its reappearance just as you do the coming of a friend.

Did you ever think of a garden being an evolution; it is always changing, and should be gradually approaching a higher ideal of beauty, harmony, restfulness and satisfaction to its owner? If we have some plant in our garden that does not fit in well with its surroundings, we should never hesitate to pull it up and throw it away. Many gardens are spoiled because the owners will not throw the excess plants away. A plant out of place is not serving its purpose and should be discarded.

LET CHILDREN HAVE THEIR GARDENS

Most children love flowers and it is a fine idea to let them have a garden of their own. It will teach them much of patience, orderliness, beauty and harmony if they are permitted to do their own work and planning. I shall long remember the children's enjoyment of gardening, and the expressions of delight that passed over their faces while they were working (playing) in their school garden. No doubt much of our enthusiasm for gardening is due to our parents' love of it during our childhood, and many of us can recall mental pictures of our mother's garden and her favorite plants. Let us help to pass this love for plants along to others.

The indications last fall were that our Perennials would be of excellent quality for this season and if the snow continues we should have no special difficulty in over wintering them, but that is one of the plant growers' biggest problems.

While it is impossible to give an absolute guarantee that all our plants will be true to name (color) and grow satisfactorily, we are endeavoring to please our customers and are glad of the opportunity to correct any errors we make. That we are succeeding in this endeavor is evidenced by the fact that we receive very few complaints and when we investigate the complaint the trouble is often due to some cause beyond our control.

As a rule all our plants are freshly dug for each order. This is an important item because success is often difficult with plants that have been in storage, or had all the soil shaken from the roots.

We will be pleased to serve you this season.

Yours sincerely,

ALFRED G. PERKINS.

P. S.—Our list of select Annuals will be sent to you about May 1. We will have 12 varieties of Snapdragon and 16 of Petunia.

About Our Lower Prices And Carriage Charges Prepaid

In general we have reduced the prices of all our Perennials, in many cases as much as **TWENTY PERCENT**. All orders over two dollars and twenty-five cents (\$2.25) will be **DELIVERED** at the prices quoted. On smaller orders we ask you to add 20 to 30 cents to cover cost of packing and postage.

ON ALL CASH AND CARRY ORDERS AMOUNTING TO TWO DOLLARS OR MORE WE WILL ALLOW A SPECIAL DISCOUNT of FIVE PERCENT.

All orders are received subject to crop being unsold and losses beyond our control.
